OUR VALUES

- Trustworthiness
- Respect
- Stewardship
- Perspective
- Service

DIFFERENTIATORS

- Rapid Implementation
- Rapid ROI
- Simple to use
- Affordable

What We Do

Identity Automation is a products and services company specializing in Identity Management and Data Integration. Identity Automation products and solutions help companies profile, cleanse, standardize, enrich and monitor their data.

Our solutions are built to be platform independent, scalable and cost effective thus meeting the needs of the largest enterprise as well as those in the SMB market.

Why Identity Automation

With today's ever increasing regulatory and compliance demands, pressures to avoid and reduce cost while, at the same time, improve productivity and service levels to the business, it is critical to rely on technology to ensure that your enterprise can meet these very high demands. Fortunately, the technologies that we offer and the services that we provide can help you do just that.

Products / Services

Access Request Management System (ARMS) - is a suite of products that provide an interface to end-users for self service tasks as well as delegation capabilities. The system also provides modules for sponsorship management and workflow management.

Data Synchronization System (DSS) - is a suite of tools used to move, transform and validate data between otherwise disparate systems. This system can be used to build EAI (Enterprise Application Integration) and ETL (Extract, Transform, Load) solutions.

Consulting Services - focused on Identity and Access Management, Infrastructure Management and Resource Management.
